

Payment – Happy Day

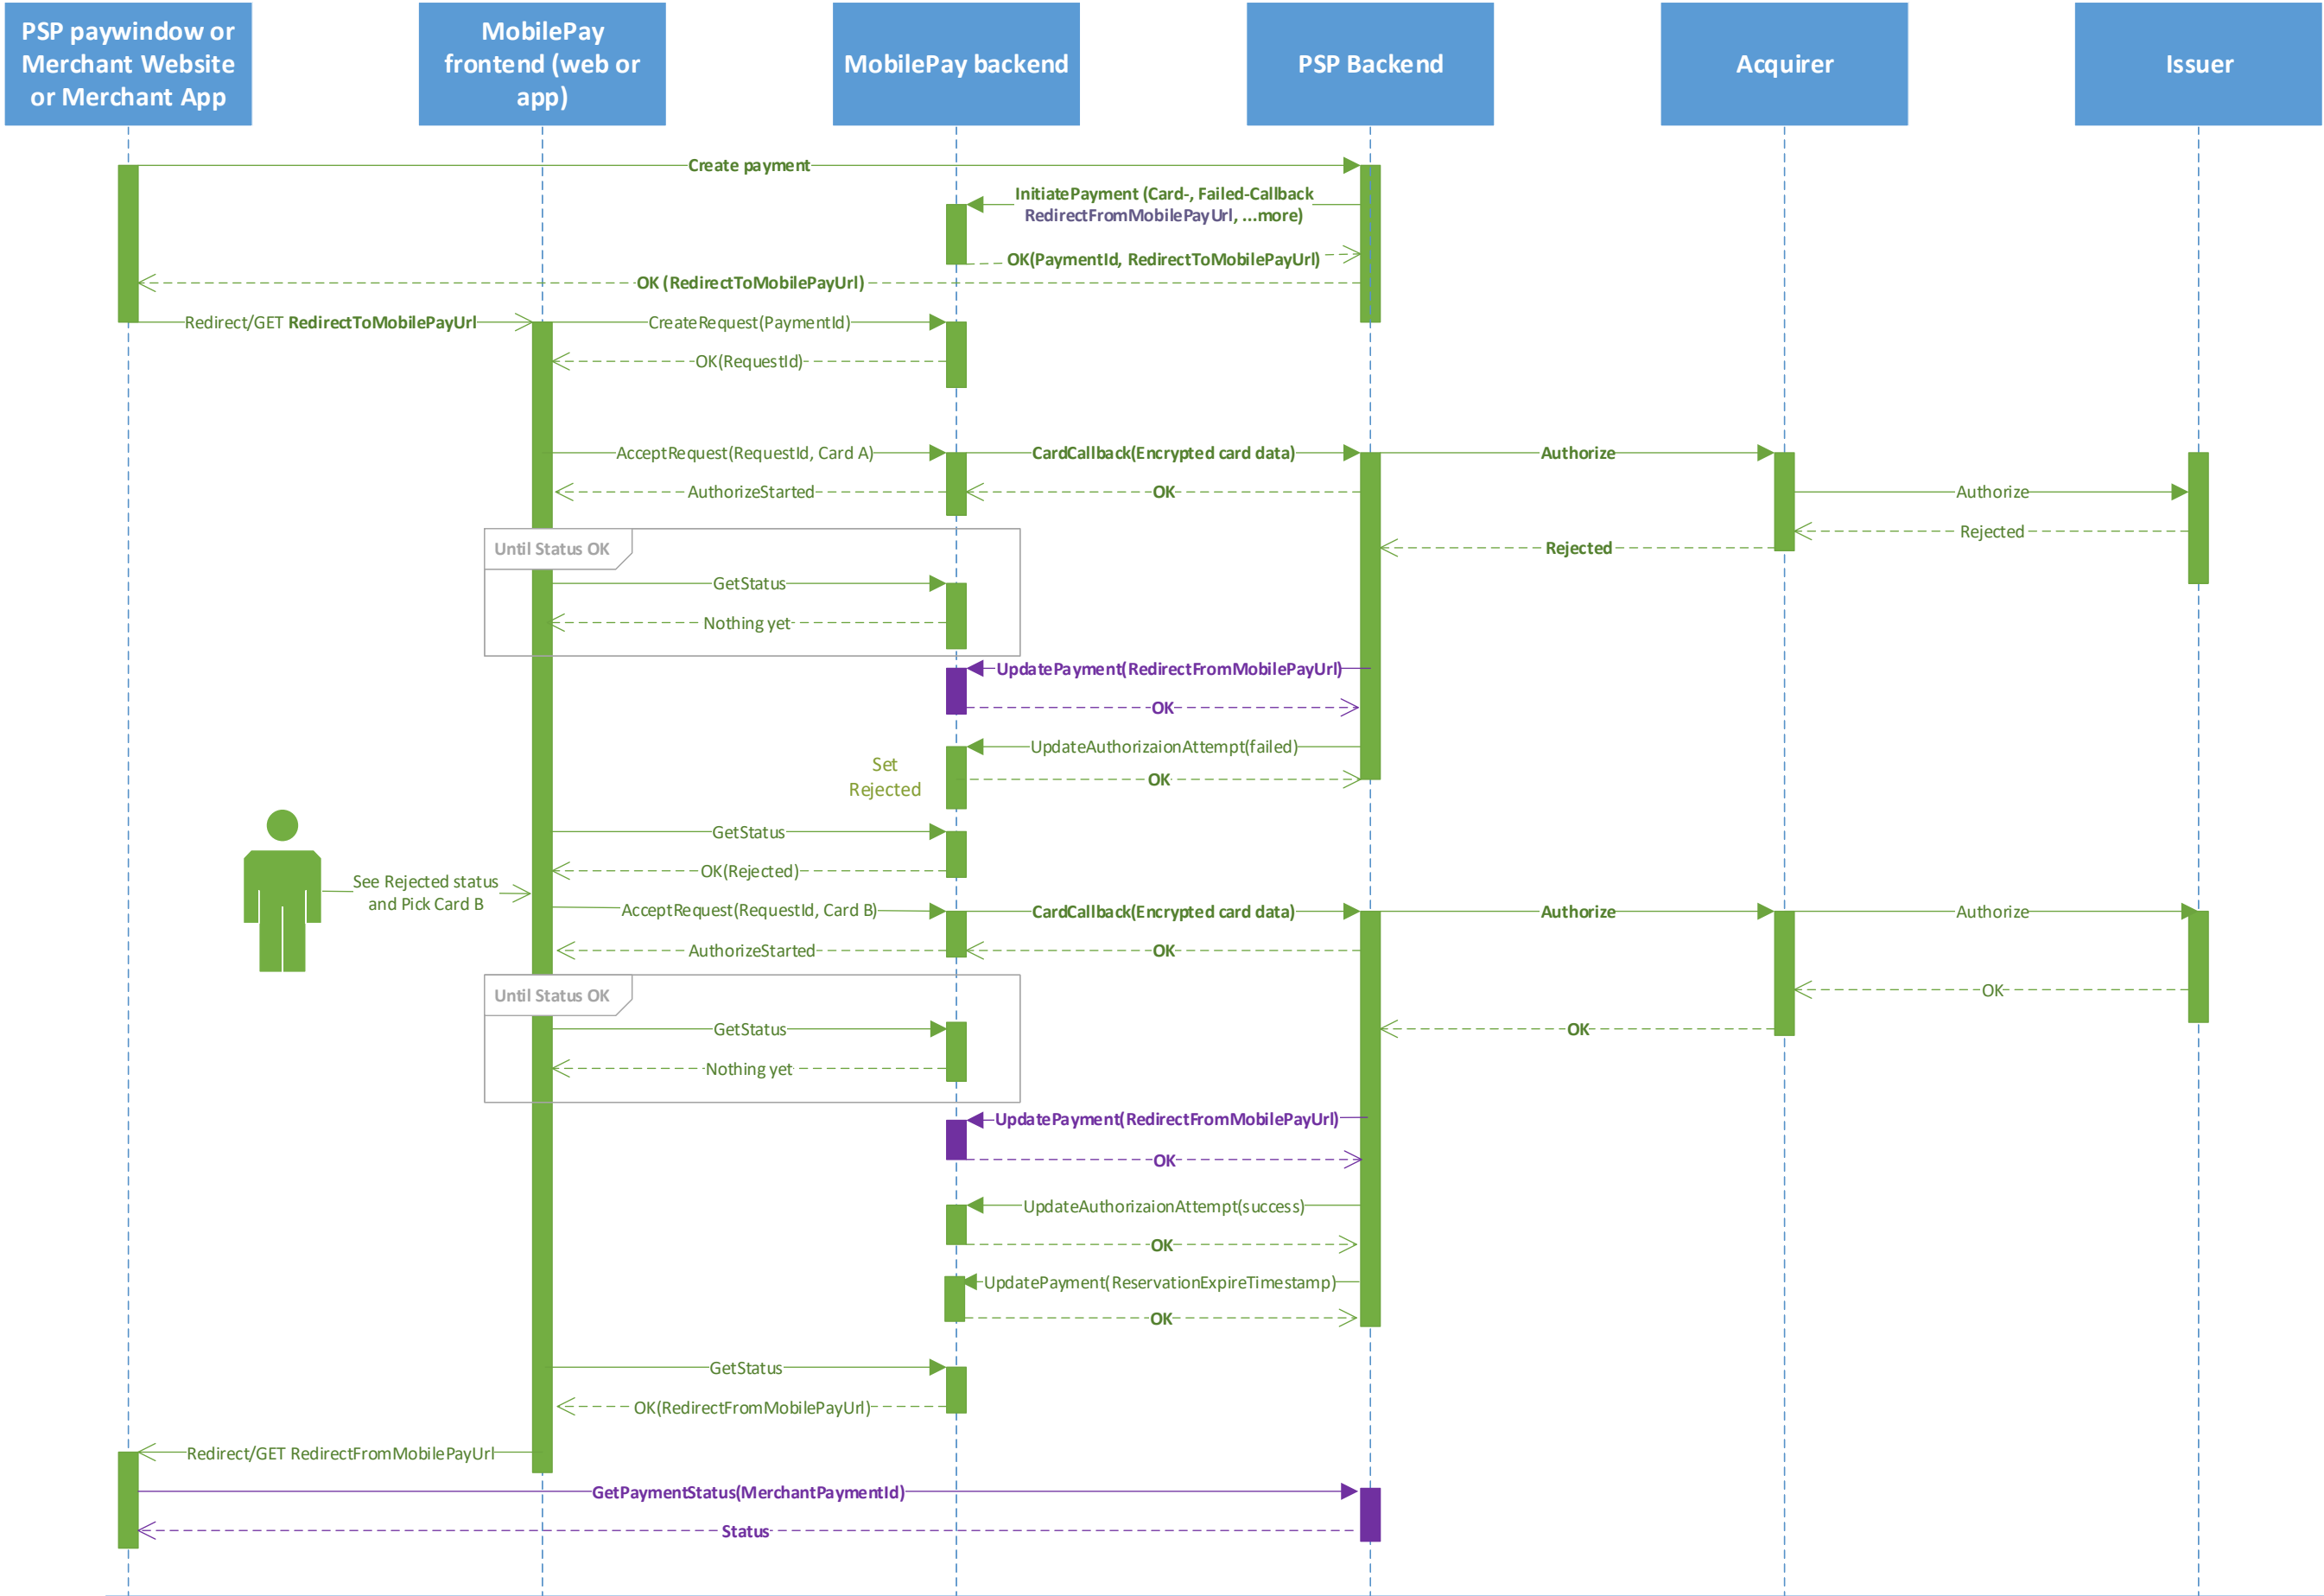

PSP either InitiatePayment with a status-failure RedirectFromMobilePayUrl and later patch a status-success RedirectFromMobilePayUrl, optionally while updating reservationExpireTimestamp. Or alternatively; Initiate with a status-neutral RedirectFromMobilePayUrl and offer a GetPaymentStatus-endpoint (Psp own name) that merchants call from the status-neutral RedirectFromMobilePayUrl-frontend, after the redirect.

Payment – Unhappy Day, User Reject

PSP either InitiatePayment with a status-failure RedirectFromMobilePayUrl and later patch a status-success RedirectFromMobilePayUrl.
Or alternatively; Initiate with a status-neutral RedirectFromMobilePayUrl and offer a GetPaymentStatus-endpoint (Psp own name) that merchants call from the status-neutral RedirectFromMobilePayUrl-frontend, after the redirect.

Payment – Bumpy Day, Acquirer/Issuer Reject

PSP either InitiatePayment with a status-failure RedirectFromMobilePayUrl and later patch a status-success RedirectFromMobilePayUrl – optionally while updating reservationExpireTimestamp. Or alternatively; Initiate with a status-neutral RedirectFromMobilePayUrl and offer a GetPaymentStatus-endpoint (Psp own name) that merchants call from the status-neutral RedirectFromMobilePayUrl-frontend, after the redirect.

Payment – Events after Authorize
